

Unit of Reproductive Endocrinology Department of Obstetrics and Gynecology Aristotle University of Thessaloniki Head: Professor G.F. Grimbizis

# Increasing complexity and challenges in Male hypogonadism

#### **Dimitrios G. Goulis**

Associate professor of Reproductive Endocrinology Aristotle University of Thessaloniki, Greece

Secretary General, European Academy of Andrology Secretary General, European Menopause and Andropause Society

**Christos P. Tsametis** Endocrinologist, Clinical Andrologist (EAA certified) Aristotle University of Thessaloniki, Greece

#### Conflict of Interest

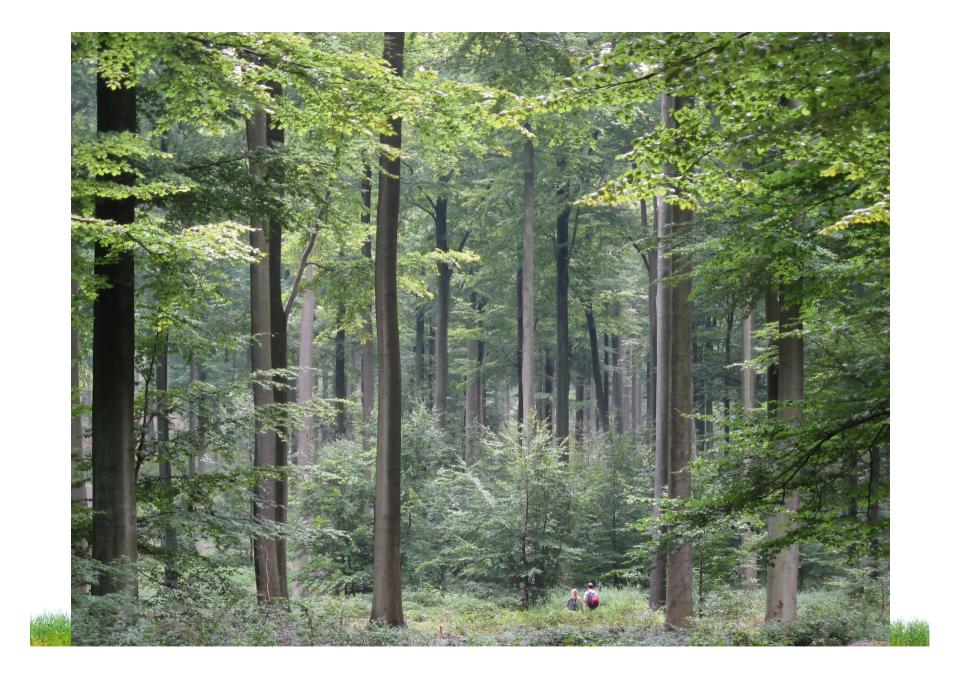

- During the last three years, we have received educational and research grants from scientific societies and pharmaceutical companies.
- None of these can be considered as conflict of interest for this lecture.

#### What we will do

- Provide current concepts of male hypogonadism
- Discuss practical issues of testosterone supplementation
- Emerge the role of life-style interventions on the management of male hypogonadism

#### What we will not do

- Go in details for each individual study
- Stack in controversies and "grey areas"

#### I had six honest serving men. They taught me all I knew. Their names were: Where, What, When, Why, How and Who.

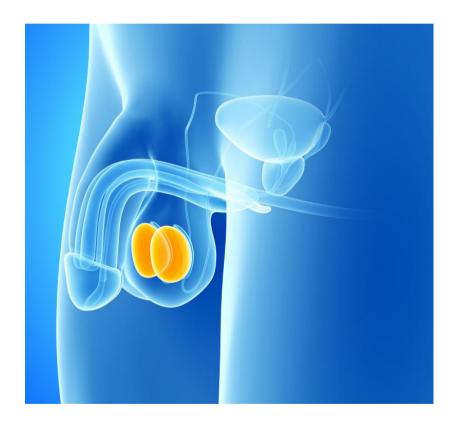

Rudyard Kipling (1965 - 1936)

# What?

What is male hypogonadism?

#### Testicular function

- Failure of endocrine function
  - Low serum testosterone
  - Male hypogonadism
- Failure of exocrine function
  - Poor sperm quality
  - Male infertility

### Testicular function

Hypogonadism  $\rightarrow$  Infertility

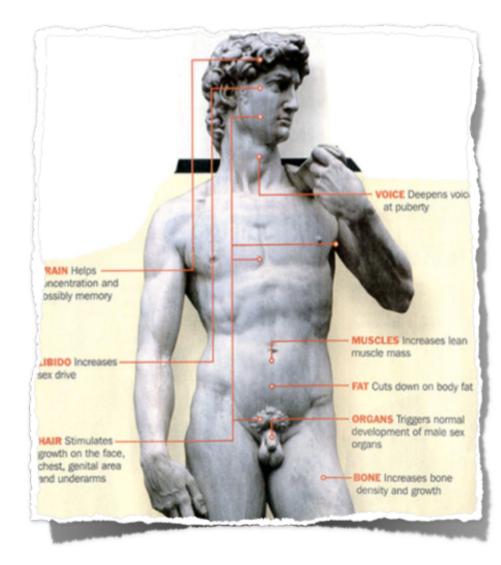

# What?

What is the clinical picture of male hypogonadism?

#### Testosterone actions

### Clinical picture

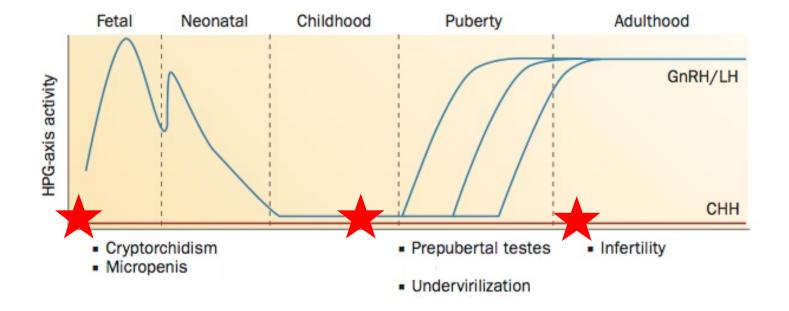

#### High specificity

- Low libido
- Decreased morning erections
- Loss of body hair
- Low bone mineral density (BMD)
- Gynecomastia
- Small testes

#### Low specificity

- Fatigue
- Depression
- Anemia
- Reduced muscle strength
- Increased fat mass

### Hypogonadism according to age

Boehm U et al. Nature Rev Endocrinol 2015;11:547

#### Massachusetts Male Aging Study

- Relative Risk (adjusted for age) for males with total T < 200 ng/dl in comparison to males with total T 400 - 600 ng/dl:
  - 1.93 for overall mortality
  - 3.30 for disease-specific mortality (cancer)
  - 1.93 for disease-specific mortality (cardiovascular disease)

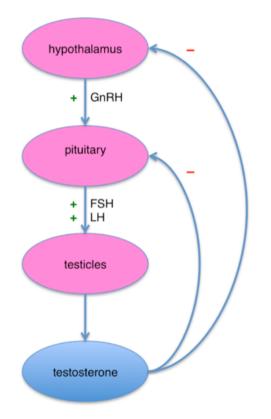

Araujo AB et al. Endocrine Society Meeting, 2005

# What?

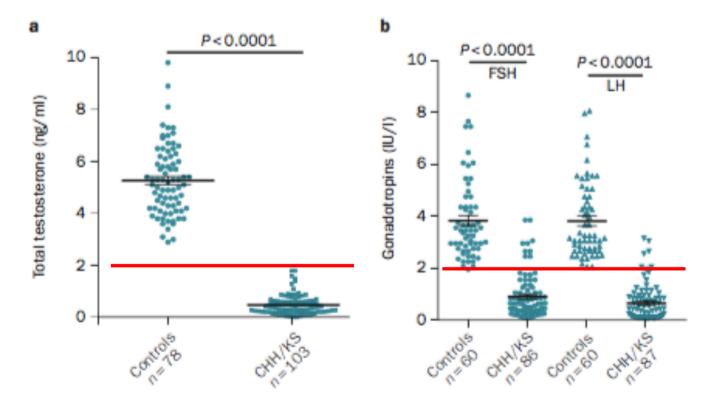

What are the types of hypogonadism?

### Hypogonadotropic hypogonadism

- Failure at the hypothalamus pituitary level
- Kallmann's syndrome

#### Hormonal profile

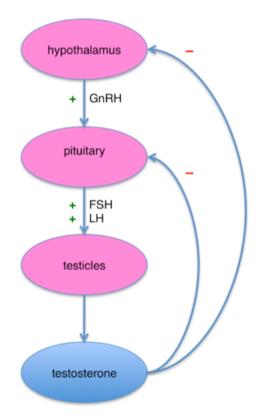

Trabado S et al. J Clin Endocrinol Metab 2014;99:E268 Young J. J Clin Endocrinol Metab 2012;97:707

#### Causes of hypogonadotropic (secondary) hypogonadism

Acquired
Tumors
Benign tumors and cysts
Craniopharyngiomas
Germinomas, meningiomas, gliomas, astrocytomas
Metastatic tumors (breast, lung, prostate)
"Functional" gonadotropin deficiency
Chronic systemic disease
Acute illness
Malnutrition
Hypothyroidism, hyperprolactinemia, diabetes mellitus, Cushing's disease
Anorexia nervosa, bulimia
Post-androgen abuse
Infiltrative diseases
Hemochromatosis
Granulomatous diseases
Histiocytosis
Head trauma
Pituitary apoplexy
Drugs - Marijuana
Congenital
Isolated GnRH deficiency
Without anosmia
Kallmann syndrome
Associated with adrenal hypoplasia congenita
GnRH deficiency associated with mental retardation/obesity
Laurence-Moon-Biedl syndrome
Prader-Willi syndrome
Idiopathic forms of multiple anterior pituitary hormone deficiencies
Congenital malformations often associated with craniofacial anomalies

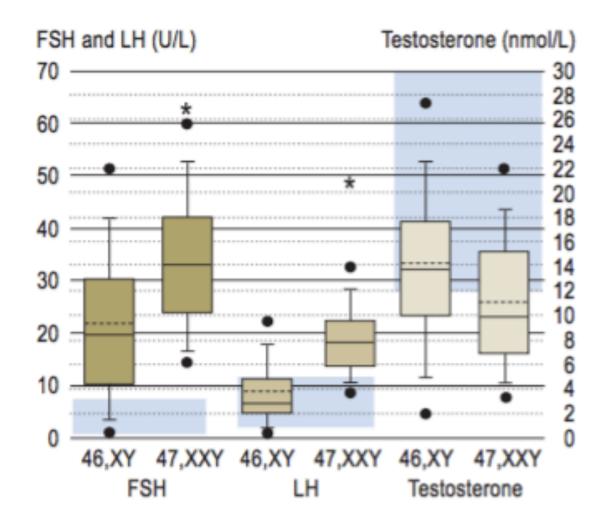

GnRH: gonadotropin-releasing hormone.

### Hypergonadotropic hypogonadism

- Failure at the testicular level
- Klinefelter's syndrome

#### Hormonal profile

Nieschlag E. Dtsch Arztebl Int 2013;110:347

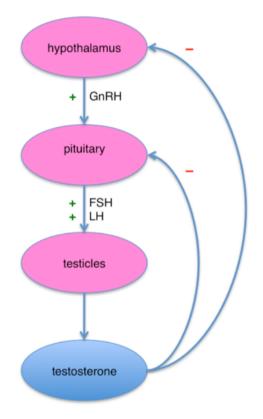

#### Causes of primary hypogonadism in males

Congenital abnormalities	
Klinefelter syndrome	
Other chromosomal abnormalities	
Mutation in the FSH and LH receptor genes	
Cryptorchidism	
Varicocele	
Disorders of androgen synthesis	
Myotonic dystrophy	
Acquired diseases	
Infections, especially mumps	
Radiation	
Alkylating agents	
Suramin	
Ketoconazole	
Glucocorticoids	
Environmental toxins	
Trauma	
Testicular torsion	
Autoimmune damage	
Chronic systemic illnesses	
Hepatic cirrhosis	
Chronic renal failure	
AIDS	
Idiopathic	

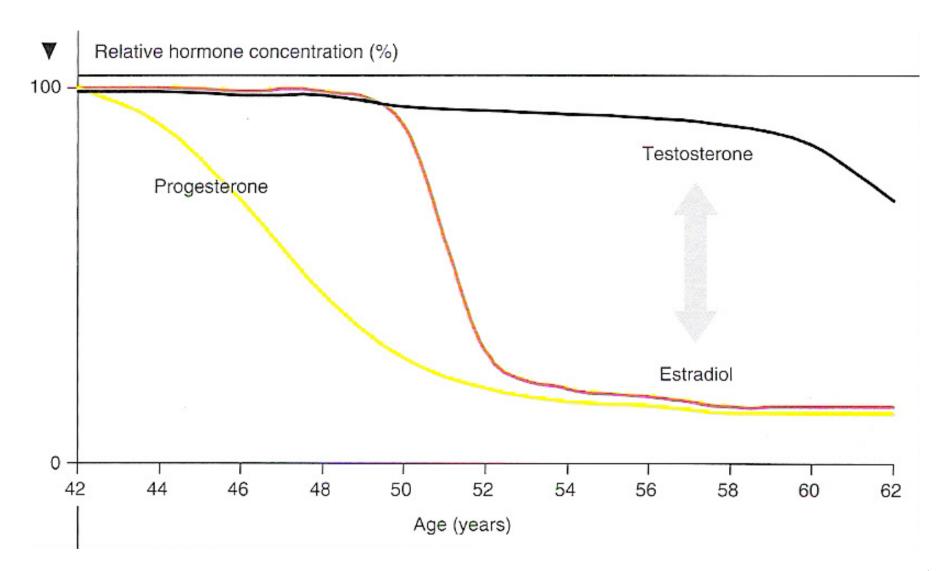

FSH: follicle-stimulating hormone; LH: luteinizing hormone: AIDS: acquired immunodeficiency syndrome.

Snyder PJ. UpToDate, 2016

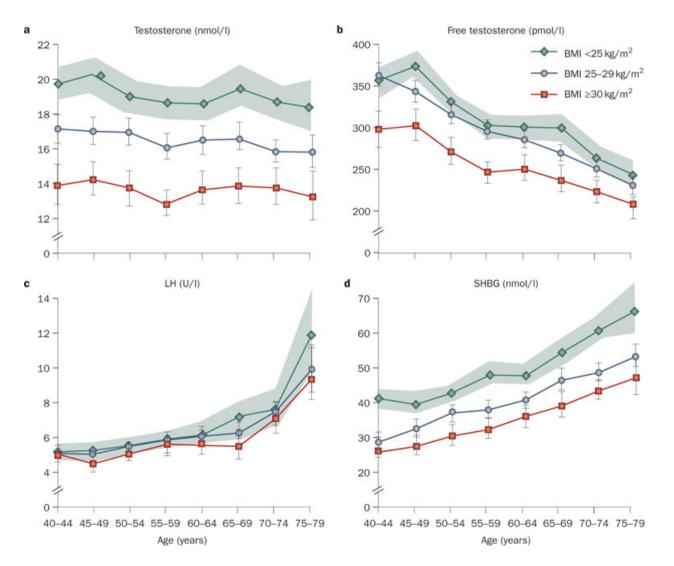

#### Late-onset hypogonadism

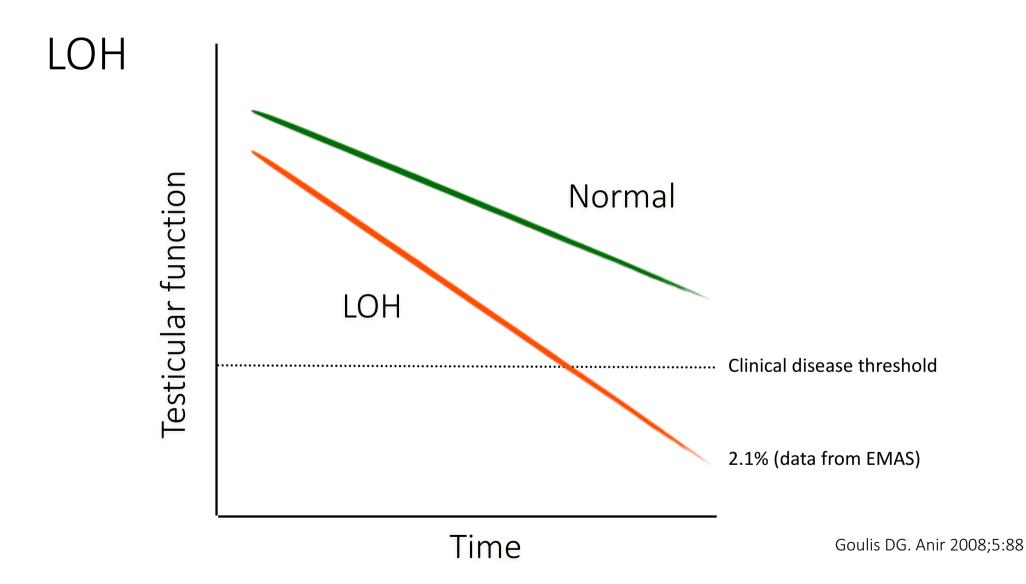

- Failure at both hypothalamus pituitary and testicular level
- Associated with advanced age
- Clinical picture
- Hormonal profile

Carr BR et al. Williams Textbook of Endocrinology 1992;8<sup>th</sup> edition

Wu FCW et al. N Engl J Med 2010;363:123

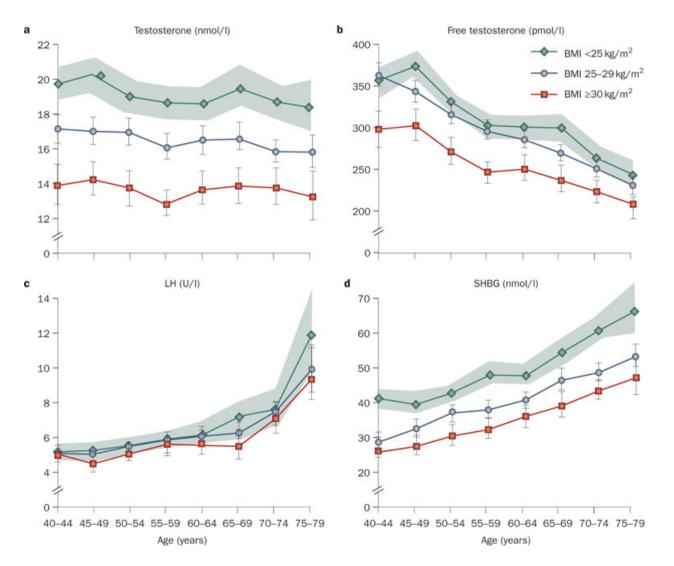

# What?

When else do we have to take under consideration?

### Metabolic syndrome: definitions

Boehm U et al. Nature Rev Endocrinol 2015;11:547

# Clinical spectrum of Kallmann's syndrome

- Cryptorchidism with or without micropenis
- Delayed puberty
- Hypogonadism
- Male infertility
- Anxiety and depression

- Hyposmia / anosmia
- Optic nerve hypoplasia
- Cleft lip and/or palate
- Dental agenesis
- Sensorineural deafness
- Congenital hearing impairment with or without pigmentation defects
- Bimanual synkinesia (mirror movements)
- Unilateral renal agenesis

## Hypergonadotropic hypogonadism

- Always
- Treat hypogonadism
- Treat co-morbidities
- Treat infertility

Healthy Male

Klinefelter's Syndrome

A

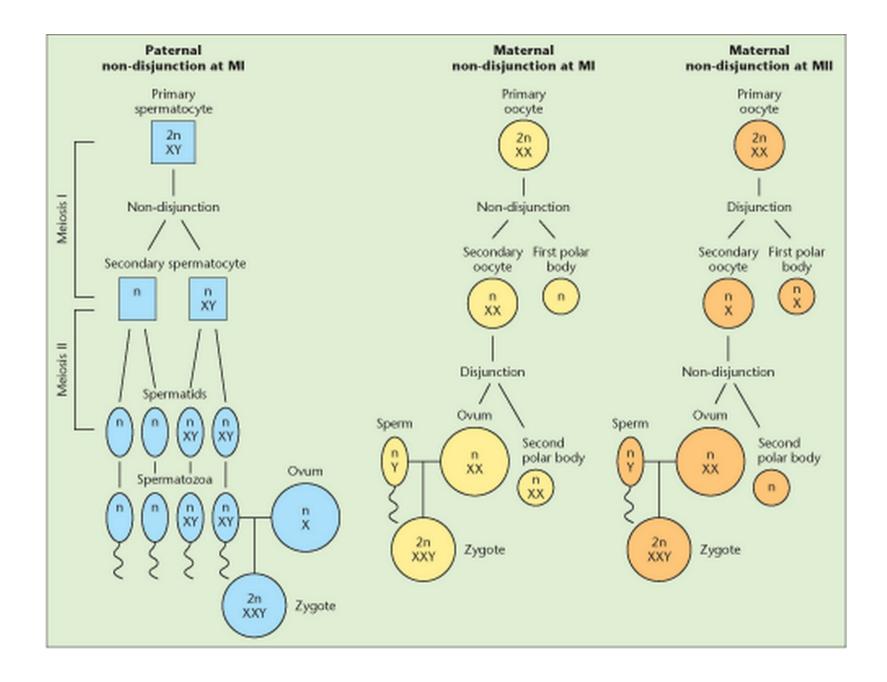

#### Co-morbidities

Comorbidities in Klinefelter syndrome: prevalence and mortality

\*SMR: standardized mortality rate, i.e. actual vs. predicted deaths (4)

Nieschlag E. Dtsch Arztebl Int 2013;110:347

## Late-onset hypogonadism

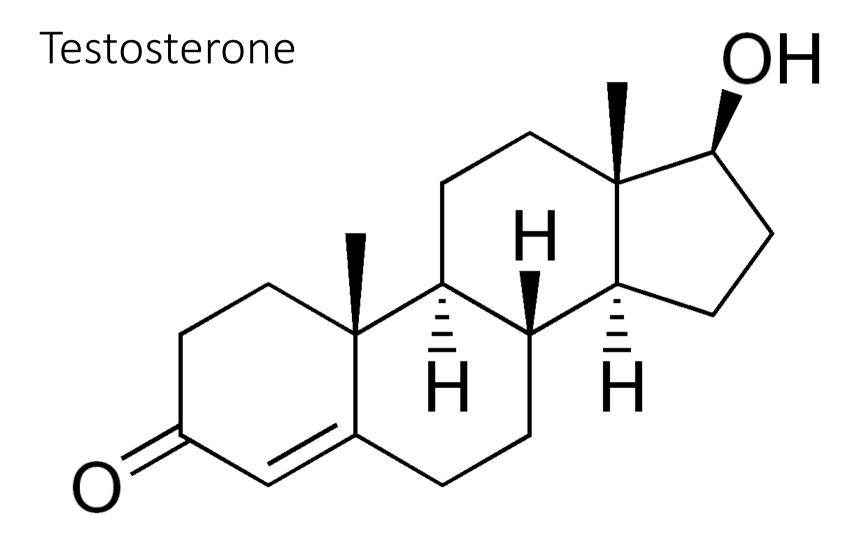

- Be cautious!
- Combination of symptoms and low testosterone concentrations
- Treat co-morbidities

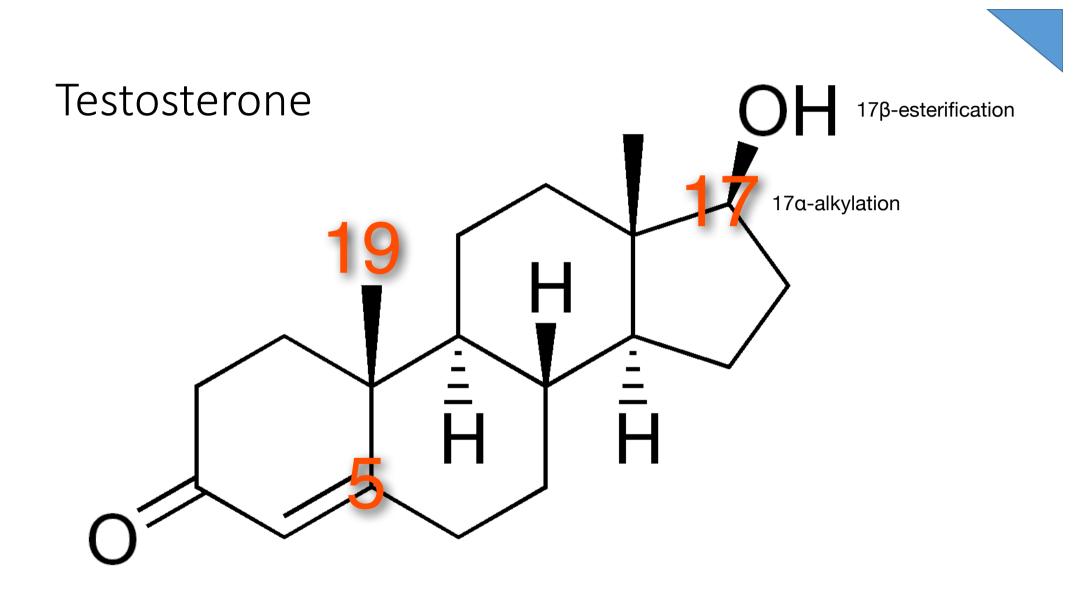

Table 2. Identification and Prevalence of Sympt	oms Related to Testosterone in	the Training Set.*				
Question Regarding Symptom	Evaluation Tool	Symptomatic Men	Asymptomatic Men	Symptom Prevalence	PV	/alue
					Total Testosterone	Free Testosterone
Sexual symptoms				%		
How frequently did you awaken with a full erection in the past month?	EMAS Sexual Function Questionnaire	≤1 time in the past mo	2–3 times in the past mo	39.9	0.007	<0.001
Were you able to get and keep an erection sufficient for sexual intercourse?	Massachusetts Male Aging Study	Neverorsometimes	Usually or always	30.3	0.34	<0.001
How often did you think about sex²†	EMAS Sexual Function Questionnaire	2–3 times in the past mo	Once a week or more	27.5	0.048	<0.001
Physical symptoms						
During a typical day, did your health limit you in doing vigorous activity (e.g., running, lifting heavy objects, or participating in strenuous sports)? If so, how much?	SF-36	Limited	Limited a little or not at all	24.7	0.03	<0.001
During a typical day, did your health limit you in walking more than 1 km?	SF-36	Limited	Limited a little or not at all	6.7	0.01	<0.001
During a typical day, did your health limit you in bending, kneeling, or stooping?	SF-36	Limited	Limited a little or not at all	6.2	0.26	0.001
Psychological symptom						
Did you feel sad ("downhearted") during the past month?	SF-36	All or most of the time	Sometimes, a little, or none of the time	4.6	0.70	0.004
Have you felt a loss of energy in the past 2 wk, including today?	Beck Depression Inventory	Not enough energy to do very much or to do anything	As much energy as ever or less energy than usual	4.9	0.94	0.01
Do you feel more tired or fatigued than usual?	Beck Depression Inventory	Too tired to do a lot of things, as compared with usual	No major change in fatigue	5.5	0.30	<0.001

Wu FCW et al. N Engl J Med 2010;363:123

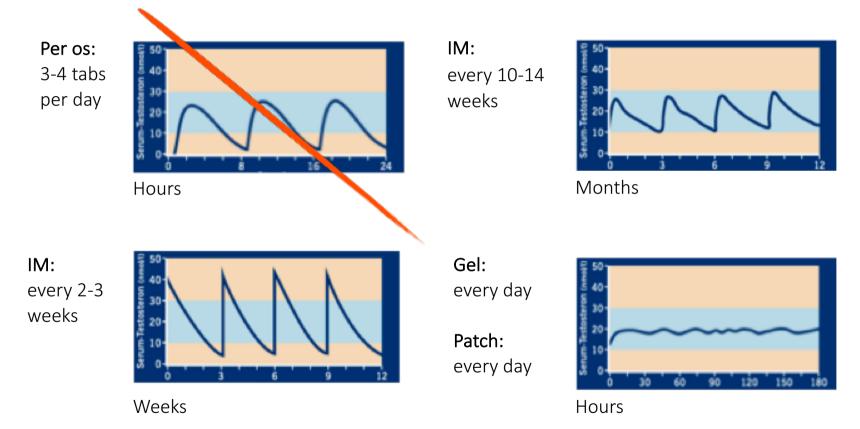

# How?

How do we treat hypogonadism?

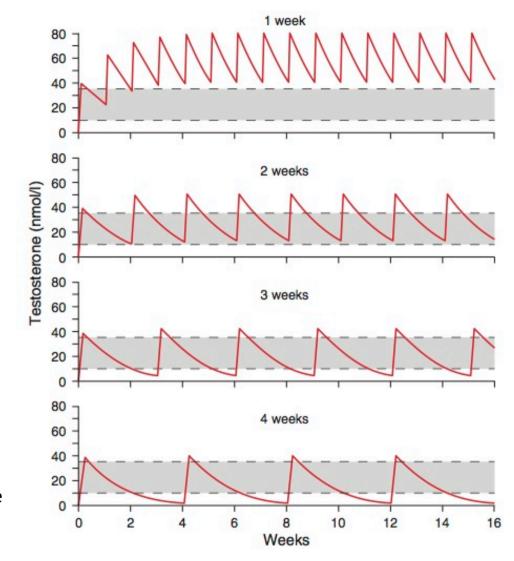

#### Testosterone replacement therapy

Jockenhovel F. Aging Male 2003;6:200

## Testosterone replacement therapy

Nieschlag E et al. Andrology, 3ed edition, 2010

Intramuscular injection of 250 mg testosterone enanthate

	Preparation	Advantage	Disadvantage
X	T pills	Effective	Liver toxicity
1	T esters	Effective No daily administration Low cost	Deep IM injection Concentration fluctuations
✓	T esters (long active)	Effective	Large volume Commitment Lack of flexibility High cost
$\checkmark$	T patches (non-scrotal)	Small fluctuations	Skin rash (30%) Poor adherence
~	T gel	Small fluctuations	Poor efficacy Skin irritation Possible transfer High cost
X	T buccal tabs		Twice a day Poor adherence
X	T pellet	Every 3 - 6 months	Local anesthesia Infection, fibrosis
X	T nasal gel	No transfer	Three times a day

# Expected benefits of T supplementation

#### **Good evidence**

- Sexual characteristics (all HG)
- Glycemic control (MetS, T2DM)
- Lipid profile (all HG)
- Muscle strength (all HG)
- Fat mass (all HG)
- Bone mineral density (all HG)
- Cardiovascular disease (MetS, no CVD)
- Sexual function (severe HG)

#### **Poor / No evidence**

- Glycemic control (all HG)
- BMI (all HG)

- Cardiovascular disease (known CVD)
- Sexual function (mild HG)

Isidori AM et al. J Endocrinol Invest 2015;38:103

#### Contra-indications

- Ca prostate
- PSA > 4 µg/l
- Ca breast
- Benign prostate hyperplasia, with obstruction (IPSS > 19)
- High hematocrit (> 50%)
- Sleep apnoea syndrome (untreated)
- Heart failure (uncontrolled)
- Age per se is not a contra-indication

# How?

How do we follow-up testosterone replacement therapy?

#### Adverse effects

#### Proved

- Liver toxicity
- Deterioration of benign prostate hyperplasia
- Mood disturbances
- Deterioration of sleep apnoea syndrome
- Polycythemia
- Acne / Gynecomastia (puberty)
- Closing of epiphyses (puberty)

#### **Under investigation**

- Dyslipidemia
- Cardiovascular disease
- Benign prostate hyperplasia
- Ca prostate
- Aggressive behaviour

#### Follow-up

#### **Clinical parameters**

- History
  - Well-being
  - Sexual function
  - Sleep apnoea
- Examination
  - Virilization
  - Muscle strength
  - Blood pressure
  - Digital rectal examination

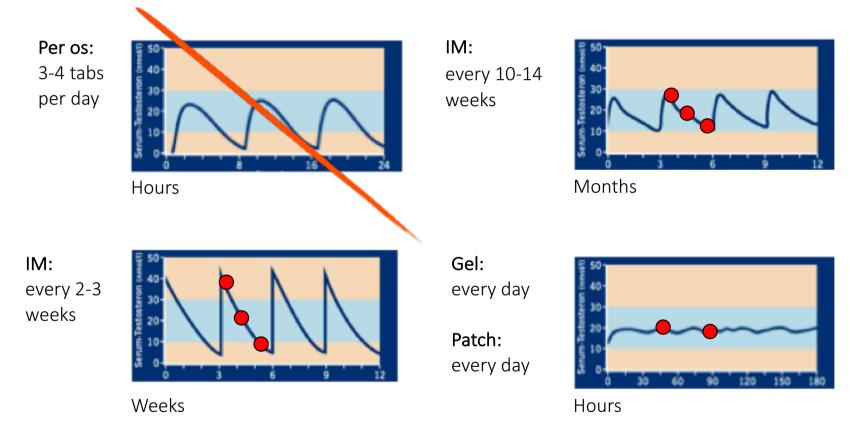

#### Laboratory parameters

- Full blood count
- Liver enzymes
- Lipid profile
- PSA
- Testosterone, total
- (LH)
- SHBG
- (Bone mineral density)

#### Testosterone replacement therapy

Jockenhovel F. Aging Male 2003;6:200

#### Effects of Testosterone Treatment in Older Men

- Examination
- Virilization
  - Muscle strength
    Blood pressure
  - Digital rectal examination
- SHBG(Bone mineral density)

Under investigation • Dyslipidemia

Ca prostate

Cardiovascular disease

• Aggressive behaviour

· Benign prostate hyperplasia

• Testosterone, total

Laboratory parameters

Full blood count

Liver enzynes

• Lipid profile

• PSA

• (LH)

#### Adverse effects

#### Proved

- Liver toxicity
- Deterioration of benign prostate hyperplasia

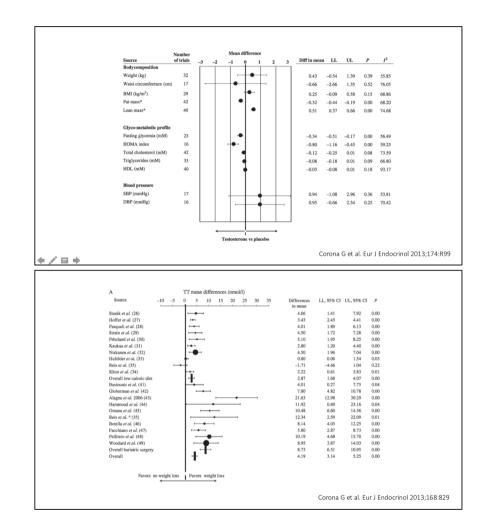

#### Mood disturbances

- Deterioration of sleep apnoea
- syndrome
- Polycythemia
- Acne / Gynecomastia (puberty)Closing of epiphyses (puberty)

#### Medical nutrition therapy

• T supplementation improves metabolic syndrome parameters

• Weight loss improves serum T concentrations

# How?

How do we conclude?

What do we know?

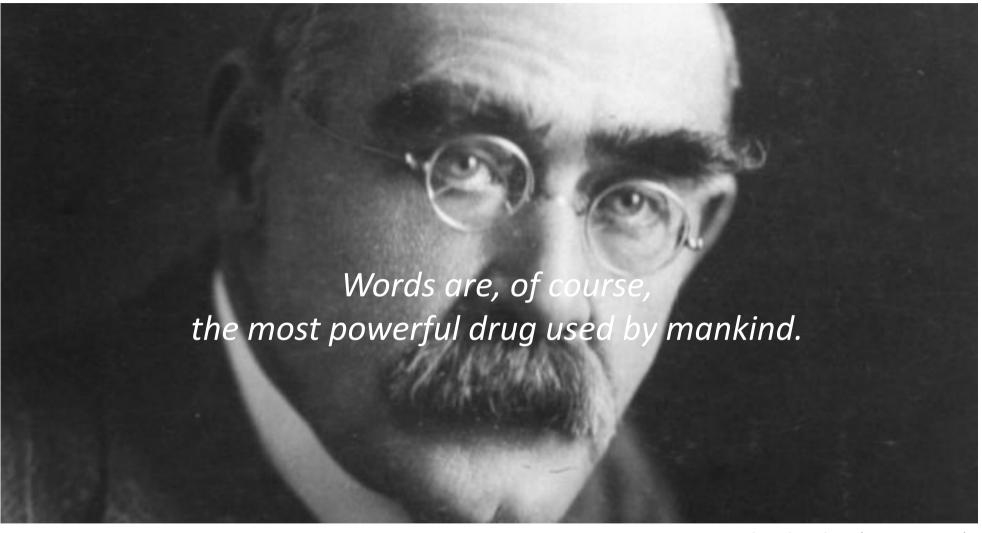

- TRT should be administered **only to men who are hypogonadal**, as evidenced by clinical symptoms and signs and subnormal serum testosterone concentration
- TRT can be administered whether the testosterone deficiency is due to hypergonadotropic or hypogonadotropic hypogonadism
- The principal goal of TRT is to restore the serum testosterone concentration within the normal range
- TRT is applied through T ester injections or transdermal preparations (gels and patches)

#### What don't we know?

- If restoring the normal circadian rhythm of testosterone is important
- If we have to administer TRT to treat the decline in serum testosterone concentration that occurs with increasing frequency above 60 years of age (LOH)

#### I had six honest serving men. They taught me all I knew. Their names were: Where, What, When, Why, How and Who.

Rudyard Kipling (1965 - 1936)

Rudyard Kipling (1965 - 1936)

#### Testosterone and weight loss are, of course, the most powerful drugs used for male hypogonadism.

Rudyard Kipling (1965 - 1936)

**Unit of Reproductive Endocrinology** Associate professor D.G. Goulis Professor emeritus J. Papadimas

Staff, Post-doc and PhD candidates

Ch. Tsametis (endocrinologist) P. Poulakos (endocrinologist) P.K. Iliadou (endocrinologist) E. Kintiraki (endocrinologist) Ch. Dimopoulou (endocrinologist) A. Kaprara (endocrinologist) G. Kanakis (endocrinologist) J. Litsas (endocrinologist) G. Mintziori (endocrinologist) A. Mousiolis (endocrinologist) P. Anagnostis (endocrinologist) S.A. Paschou (endocrinologist) E. Tsirou (endocrinologist - dietician) A.-G. Kouthouris (urologist) I. Koutsogiannis (urologist) K. Toulis (endocrinologist) K. Papadimitriou (endocrinologist) N. Athanasiadi (dietician) V. Harizopoulou (midwife) E. Taousani (midwife) D. Savvaki (ergophysiologist)
